

**IN THE CLAIMS:**

**Please enter the following amended claims:**

1. (Currently Amended) A card verification system comprising:  
a card in which a card identification code is registered;  
a read unit configured to ~~which~~ reads said card identification code from said card; and  
a verification apparatus configured to ~~which~~ verifies said card only when a place in  
which said read unit is located is within an area corresponding to said card identification code.
2. (Currently Amended) The card verification system according to claim 1, wherein  
said read unit has a read unit identification code, and notifies said read unit identification code to  
said verification apparatus, and  
  
said verification apparatus has a table which shows a correspondence relation between  
said read unit identification code and said ~~existing~~ place, and searches and acquires said ~~existing~~  
place corresponding to said notified read unit identification code from said table.
3. (Currently Amended) The card verification system according to claim 2, further  
comprising a mobile phone,  
  
said verification apparatus having ~~has~~ another table which shows a correspondence  
relation between said card identification code and said mobile phone, and

said area ~~being~~is coincident with an area for one or more cells to which said mobile phone belongs.

4. (Currently Amended) The card verification system according to claim 3, further comprising a storage unit which stores data showing said area corresponding to said mobile phone, and

said verification apparatus acquiring~~ing~~es said area data from said storage unit.

CI  
5. (Original) The card verification system according to claim 4, wherein a user of said mobile phone deletes said area data from said storage unit by operating said mobile phone, and

said verification apparatus does not verify said card when said area data is not stored in said storage unit.

6. (Original) The card verification system according to claim 1, wherein said card is a credit card.

7. (Currently Amended) A card verification method using a card verification system which comprises a card ~~in which~~that a card identification code is registered, a read unit which reads said card identification code from said card, and a verification apparatus which verifies

said card only when a place in which said read unit is located corresponds to said card identification code, said method comprising ~~the steps of~~:

- acquiring from said read unit~~card~~, the place of said read unit which read said card;
- acquiring an said area ~~off from~~ said ~~-card~~recorder;
- determining whether or not said place of said read unit is in said area;
- when said place of said read unit does not belong to said area, prohibiting settlement.

C1 8. (Currently Amended) The card verification method according to claim 7, further comprising ~~the steps of~~:

- deleting said ~~recorded~~ area; and
- when a second said area of the card is not ~~recorded~~ a recognized area in said recorder, prohibiting the settlement.

9. (Previously Presented) A card verification method comprising:  
registering an identification code area comprising an area where a card is located and an identification code of the card;

transmitting over a telecommunication network the identification code area to a verification module, upon request by the verification module;

reading the card identification code from a card by a read unit; and

verifying the card only when a location of the read unit corresponds to the identification code area.

10. (Previously Presented) A method of claim 9, wherein the identification code area is coincident with an area for one or more cells belonging to a mobile telephone, and

wherein a verification apparatus accesses a table that shows a correspondence relation between the card identification code and the mobile telephone.

C1  
11. (Previously Presented) A card verification system, comprising:  
a position registering module configured to register a geographical area and an identification code of a card;

a verification module configured to receive over a telecommunication network the area and the identification code of the card from said position registering module, and further configured to verify the card read by a card reader requesting card verification only if a location of the card reader corresponds to the area of the card.

12. (Previously Presented) The card verification system according to claim 11, further comprising a mobile phone, and a table showing a correspondence between the

**AMENDMENT UNDER 37 C.F.R. § 1.111**  
U.S. Application No. 09/923,536

**Q65782**

C1  
identification code of the card and said mobile phone, wherein the area of the card is coincident with an area for one or more cells to which said mobile phone belongs.

13. (Previously Presented) The card verification system according to claim 11, wherein the card is a credit card.
